

Process Solutions - Through Formulation & Fabrication

Customer: SIC 3999 - Manufacturing Industries, NEC
NAICS 339999

What they do: Manufacture candles. One very large segment is votive candles.

The need: In the final stages of manufacturing hundreds of thousands of votive candles are conveyed on a belt conveyor to an end stop. Candles are picked by hand and placed on a large cart for transport to packaging. The problem is the candles are still hot and bit soft. Hand picking damages the candles.

The solution: MFG Tray's model 607008 tray. We cut off one end of the tray. The trays are then placed at the end of the conveyor and the candles slide onto the trays. The trays are picked up and slid into a rolling rack. The racks accept our trays two (2) across and two (2) deep. The rack is then rolled to packaging.

To date they have purchased over 12,000 of our trays.
