

Process Solutions - Through Formulation & Fabrication

Customer: SIC 4513 Air Courier Services
NAICS 45211

What they do: Worldwide package delivery. This company, as all others in this very competitive business, utilizes vans, over-the-road truck, and airplanes to move packages across the world.

The need: To replace a tub type container, similar to airport garment carriers. The plastic tube they were using simply did not hold up to the harsh environment and rough handling they were exposed to. Since they place small packages of all shapes in these tubs, they needed better protection.

Solution: We recommended our Model 780108 Nest & Stack containers. This container fit every need they have. Our last hurdle was to create drainage for the times water might get into the tub. The simple solution was to drill drain holes in each bottom corner of the tub. Standard formulation and simple fabrication have resulted in the sales of several thousand of these MFG Tray Co. containers.
